

Nanang Aditya Sutahar

Personal Data

Date of Birth : 10-10-2001
Nationality : Indonesia
Marital Status : Single
Gender : Male
Religion : Islam
Postal Address : Rungkut Lor Gg IV/19, Surabaya
Phone : +62 85790663367
Email : nanangaditya2001@gmail.com
Foreign Language Proficiency : English

Educational Qualification

Associate's Degree (D3) at Electronic Engineering Polytechnic Institute of Surabaya (EEPIS), Majoring in D3 Informatics Engineering
GPA 3.67 / 4.00 (2020-2023)

Bachelor's Degree (S1) at Esa Unggul University, Majoring in Informatics Engineering (D3-S1)
GPS 3.66 / 4.00 (2024-Present)

Technical Qualification

Programming/Coding Languages

- JavaScript
- SQL
- PHP
- Java
- Python
- go
- .Net

Platform / Operating

- Windows
- Mac Os

Framework

- Express.js
- Laravel
- Spring Boot
- Spring
- Golang
- .ZK (Java Web Framework)
- Tailwind
- React Js
- Bootstrap

Development Tools

- IntelliJ IDEA
- Visual Studio Code
- DBeaver
- PL SQL
- Postman
- Bitbucket
- Herd
- Git Bash

- Git Lab
- Eclipse (Java)
- Laragon
- Draw io
- Data Grid

Application

- Jira
- Canva
- Figma
- Microsoft Word
- Microsoft Excel
- Microsoft Power Point
- WebSphere

Work Assignments

1. March 2025 - Present, as backend at PT.Jasa Marga

Onsite

Job Description:

- **Project AGGREGATOR OPERASI**

- Developed a centralized master data aggregation service to unify data across multiple applications within Jasa Marga.
- Addressed data inconsistency issues by standardizing master data into a single source of truth (aggregator service).
- Designed and built RESTful APIs to allow multiple internal applications to consume standardized data.
- Currently in development and testing phase (DEV environment), with integration already being tested across several Jasa Marga applications.
- Ensured scalability and performance for cross-application data access.

Skill : Express.js, PostgreSQL, Redis, Docker, Postman, Jira

- **Project JM-RISE (Jasa Marga Toll Road Construction Monitoring Application)**

- Designed and developed the database architecture for the JM-RISE application, including table structures, entity relationships, data normalization, and schema adjustments to support toll road construction monitoring requirements.
- Implemented database structures into the application by creating migrations, indexes, and optimizing queries to improve performance for construction progress tracking and project reporting.
- Maintained and enhanced the database continuously, including adding new structures, refining data relationships, integrating with external APIs, and ensuring data consistency and integrity across the application.

Skill : Express.js, PostgreSQL, Redis, Docker, Postman, Swagger, GitLab, Jira

- **Project JM-ACT (Jasa Marga Adukan Cermati Tuntaskan)**

- Refactored a monolithic Laravel-based system into a service-oriented architecture by introducing RESTful APIs to support mobile integration.
- Designed and developed core APIs including complaint creation, complaint history, and notification services, which are consumed by the Travoy mobile application.
- Enabled toll road complaint submissions through mobile platforms, improving accessibility and user engagement.
- Implemented notification mechanisms using push notifications and email (mail sender) to ensure users receive real-time updates for every complaint activity.
- Created and maintained API documentation using Postman and Scramble (Laravel API documentation tool) to improve collaboration with frontend and mobile teams.
- Supported CI/CD processes and deployment workflows using GitLab.

Skill: Laravel, PHP, PostgreSQL, Docker, GitLab CI/CD, Postman, Jira, Scramble

- **Project JIMMS (Jasa Marga Integrated Maintenance Management System)**

- Fixed environmental features on the dashboard

- Add roles and permissions for GH approval
- edit enum evaluations for GH approval

Skill : Laravel, SQL, Postmant, Jira, PHP, jenkins, git lab

Project Specification:

- **Project AGGREGATOR OPERASI**
Centralized master data service for cross-application integration.
- **Project JM-RISE (Jasa Marga Toll Road Construction Monitoring Application)**
A web-based application designed to monitor toll road construction progress, manage project data, and generate reports
- **Project JM-ACT (Jasa Marga Adukan Cermati Tuntaskan)**
Complaint management system integrated with mobile apps (Travoy) to handle toll road user reports with real-time notifications.
- **Project JIMMS (Jasa Marga Integrated Maintenance Management System)**
Developing a JIMMS website that is already running, using PHP Laravel, for the database using PostgresQL, this website is for environmental maintenance on the Jasa Marga toll road

2. March 2024 – February 2025, as programmer at PT. Adira Dinamika Multi Finance Onsite

Job Description:

- **Maintenance Core Application ADIRA**
 - Carry out maintenance and improvements to the Action core application, which is used by branches for customer loan applications.
 - Handle and fix problems that have been categorized as MTC (Maintenance) by the System Analyst.
 - Ensure application stability and performance according to company operational needs.
- **resolve issue ticket from branch Company**
 - Analyze and resolve problem tickets submitted by branches regarding loan data input.
 - Checking the validity of the data using SQL, ensuring whether updates, inserts, or just checking the data is required before returning it to the user for re-input.
 - Coordinate with users to ensure provided solutions can be implemented correctly.
- **Project Digitalisasi Document**
 - Developing a loan document digitization system using Spring Boot and Apache POI.
 - Automate the creation of digital documents that were previously managed manually.
 - Implement electronic signature and e-stamp features in digital documents to simplify the printing and document validation process.
 - creating wrap services from several services for digitalizing documents

Skill: Spring, Spring Boot, .ZK, SQL, Postman, Java 7, Java 17, Unit test, Consume Kafka, jira, bitbucket, Data Grid, Websphere, .Net

Project Specification:

- **Maintenance Core Application ADIRA**
The name of the core application at Adira is called action, this application will be used by the branch for customers who will advance loans, maintenance of this application is usually carried out when there are recurring problems, which are then made into MTC / maintenance, the system analyst determines whether this problem will be made into maintenance, my job is only to fix problems that have already entered maintenance.
- **Resolve Issue Ticket from Branch Company**
Resolve ticket issues from the branch, now this solves the problem when the branch inputs loan data, the problem here is mostly the data, whether the data is null, or the user is responding to input the data as a result the desired mapping is not appropriate, solving these ticket problems uses SQL by checking the data first then resolving whether it's updating, inserting, or just checking, then returning it to the user for re-input
- **Project Digitalisasi Document**
This project is about making all loan documents at Adira digital, whereas previously, the documents themselves were still manual. here I use springboot and apache poi to generate the document, so later when it is printed the document will be filled in and signed with an e-stamp

3. **May 2023 – July 2023, as full stack developer at Lavin technologies (Freelance)**

Onsite

Job Description:

- Developing a web-based supermarket cashier application using Laravel as the main framework.
- Implement key features such as transaction management, sales recording, product management, and financial reports.
- Uses JavaScript to improve interactivity and user experience.
- Implement Ag-Grid to display data in dynamic and responsive table form.
- Using Bootstrap to ensure an attractive and easy-to-use interface.
- Managing databases using MySQL, including database schema design and query optimization.
- Perform testing and debugging to ensure the system runs optimally before implementation in the production environment.

Skill: Laravel, Laragon, Java Script, Bootstrap, Ag-grid, SQL

Project Specification:

- **Cashier Supermarket**

Developing a supermarket cashier website using the PHP programming language, for the framework using Laravel, here I also apply Javascript, then for the database using MySql, this website will later be used by the client when opening his private supermarket

4. **September 2023 – November 2023 as Application Developer Jr. PT. Mitra Integrasi Informatika**

Onsite

Job Description:

- **Application Management Training**

- Building Training Management applications for users who want to take part in or teach in training programs.
- Using Spring Boot as the main framework in backend development.
- Compile system analysis using BPMN (Business Process Model and Notation).
- Create UML (Unified Modeling Language) diagrams to describe application architecture and workflow.
- Designing an ERD (Entity Relationship Diagram) to define the application database structure.
- Using Java Mail Sender to send automatic emails to users regarding training notifications, registration confirmations, and other information.
- Integrate the frontend with the API provided by the backend to display and manage training data.

Skill: Java, Springboot , Tailwind , JavaScript, SQL, Postman, DataTables, Draw io

Project Specification:

- **Application Management Training**

Design and build a web-based application using the Spring Boot framework, the application I built is a training management application, so this website is used for users to take training and train to teach in training

5. **August 2022 – Desember 2022, as full stack developer at PT. Unicam Digital Studio Pictvres (Internship)**

Onsite

Job Description:

- Developing a counseling website for middle and high school students in Yogyakarta using Laravel.
- Using Laragon as a development environment and implementing features using JavaScript, Bootstrap, and DataTables.
- Design and manage SQL databases to store user data, counseling history, and required reports.
- Perform testing and debugging to ensure application quality and performance.

Project Specification:

- **Konsel**

Developing a supermarket cashier website using the PHP programming language, for the framework using Laravel, here I also apply Javascript, then for the database using MySql, this website will later be used by the client when opening his private supermarket

Projects

1. November 2025 – Present, Agregator Operasi is a centralized master data service designed to unify and standardize data across multiple applications within Jasa Marga. This project was built to address inconsistencies between existing systems by consolidating master data into a single source of truth that can be accessed by all applications. The development process requires careful adaptation to existing data structures to ensure that legacy systems continue to function without disruption. This is why the project takes longer, as the aggregator must adjust to already established data rather than replacing it. Currently, the system is still in the development and testing phase, with several Jasa Marga applications already integrating and consuming the APIs in a development environment.

Skill: Express.js, PostgreSQL, Redis, Docker, Postman, Jira

2. April 2026 – May 2026, JM-ACT (Jasa Marga Adukan Cermati Tuntaskan) is a complaint management system that enables toll road users to submit reports through the Travoy mobile application. Initially built as a monolithic Laravel application without API endpoints, this project was enhanced by introducing RESTful APIs to support mobile integration. The system includes features such as complaint creation, complaint history, and notification services. Notifications are delivered through both push notifications and email using a mail sender, ensuring users receive real-time updates for every activity. API documentation was created using Postman and Scramble to support collaboration between backend, frontend, and mobile teams.

Skill: Laravel, PHP, PostgreSQL, Docker, GitLab CI/CD, Postman, Jira, Scramble

3. June 2025 – October 2025, JM-RISE (Jasa Marga Toll Road Construction Monitoring Application) is a web-based application designed to monitor toll road construction progress, manage project data, and generate reports. In this project, the database architecture was designed and developed, including table structures, entity relationships, normalization, and schema adjustments to support business requirements. The implementation included creating migrations, indexing strategies, and optimizing queries to improve performance for tracking and reporting. The system was continuously maintained and enhanced by refining data relationships, integrating external APIs, and ensuring data consistency and integrity across the application.

Skill: Express.js, PostgreSQL, Redis, Docker, Postman, Swagger, GitLab, Jira

4. March 2025 – May 2025, JIMMS (Jasa Marga Integrated Maintenance Management System) is a maintenance management system used for environmental operations on Jasa Marga toll roads. This project focused on enhancing an existing Laravel-based application by improving environmental dashboard features for better monitoring and reporting. Additional improvements included implementing role-based access control (RBAC) for approval workflows and refining evaluation enums to better align with business processes.

Skill: Laravel, PHP, PostgreSQL, SQL, Jenkins, Postman, GitLab, Jira

5. December 2024 ~ February 2025, DIGITALISASI DOCUMENT, Document Digitization Project, is a project to move manual submission documents into digital, this project is working together with my tax to get e-stamps and here we also create a UI for Adira's signature so later the document process will only be generated then printed

Skill : ZK, SQL, Postman, java 7, java 17, unit Test, Consume Kafka, Docker

6. September 2024 ~ December 2024, PREIBALAP, PreiBalap is a registration website for car racing competitions throughout East Java, this project is a freelance project carried out by 2 people including me, here using Laravel React.

Skill : Tailwind, TypeScript, React JS, Postman, Laravel, Git

7. August 2024 ~ September 2024, AUTOFILL DOCUMENT, Project autofill document, this is because previously the document has not been autofilled, so the concept of the action application is if there is a customer who advances a loan but has not yet reached the final step and the customer advances again with a different loan, if the terms of the loan have the same documents then it will be auto fill
Skill : ZK, .Net, SQL, Postman, java 7
8. July 2024 ~ August 2024, PROJECT PENGKINIAN DATA, The background to this project is, currently, the process of updating customer data in Action is only validated through Dukcapil and the results are only updated to GR Dedup. To reduce the frequency of hits to Dukcapil, changes to the validated fields are required. In addition, the Pop Up display that failed to update data needs to be improved to display details of data discrepancies with Dukcapil, so that the field team can understand the cause of the failure more clearly.
Skill : ZK, .Net, SQL, Postman, java 7
9. February 2024 ~ August 2024, CONNECT BY BCA, Connect is an m-banking service application available on the Android app and website, this is the final project of the Synergy Academy X BCA bootcamp. What he did was create a display using React, as well as consume API from the BE team
Skill : Tailwind, Java Script, React JS, Postman
10. November 2023, TRAINING MANAGEMENT, final assignment for Metrodata coding camp, create a training management website, there are datatables, preview, upload attachments, create API, consume API.
Skill : Spring Boot, Tailwind, JavaScript, SQL, Postman
11. October 2023, POKEMON, assignment to consume Pokemon API dummy data during metrodata coding camp.
Skill : HTML, CSS, Tailwind, Java Script
12. Mei 2023 ~ July 2023, SUPERMARKET, freelance assignment to create a website about supermarkets includes ag-grid js, export pdf, print struck, create API, consume API
Skill : Laravel, Bootstrap, JavaScript, SQL, Postman, ag-grid
13. January 2023 ~ Juni 2023, CARE FOR ORPHANTS, final college assignment to create a website about donations to care for PENS orphans, there are datatables, export pdf, create API, consume API.
Skill : Laravel, Bootstrap, JavaScript, SQL, Postman, query builder
14. August 2022 ~ December 2022, KONSEL, assigned during internship to create a website entitled KONSEL which means online counseling for middle and high school children throughout Yogyakarta, there are Datatables, Multi role, export PDF, Create API.
Skill : Laravel, Bootstrap, JavaScript, SQL, Postman
15. November 2021 ~ Mei 2022, SIABDI, assignment to create a website entitled SIABDI which means community service for campus, there are datatables, import PDF, filter name and title of lecturer's service.
Skill : Laravel, Bootstrap, JavaScript, SQL, Postman

Trainings

1. Synergy Academy X BCA, Fundamental Programming, Fundamental Java Script, Frontend fundamental, Framework react JS , Project.(February 2024 - August 2024)
2. Metrodata Coding Camp , Fundamental Programming, Java Programming, Framework Java Spring boot, Frontend fundamental, Backend fundamental, Project.(September 2023)

Organization

1. Head of Home Affairs Departement at Informatics Engineering Student Association (HIMIT PENS) for the period of April 2022 - April 2023
2. Expert Staff of community service department at Eepis Bidikmisi Organization (EBIO PENS) for the period of January 2022 - January 2023
3. Young Staff of Home Affairs Departement at Informatics Engineering Student Association (HIMIT PENS) for the period of March 2021 - February 2022
4. Young Staff of community service department at Eepis Bidikmisi Organization (EBIO PENS) for the period of January 2021 - January 2022

Experiences

1. volunteers care for villages at EBIO as a Conceptor distributing good fortune to residents in Kepetingan Hamlet, Sidoarjo City, East Java, as well as teaching elementary school education, and making fish preparations that will be sold by local residents. (January 2022)
2. volunteers care for villages at EBIO as a Volunteer distributing good fortune to residents in Mlurus Hamlet, Lamongan City, East Java, as well as teaching elementary school education, and making wickerwork that will be sold by local residents. (January 2021)

Awards/Achievements

1. 1st place in Futsal from PENSCOMP (2023)
2. 3rd place short video from PENSCOMP (2021)
